

# Talon Car Park Management

The Car Park Management software application is used to calculate the time a vehicle has spent in a car park and alert an operator if a vehicle leaving has exceeded the permitted free parking period.

A typical system will consist of two cameras covering the entrance and exit of a car park, these cameras send their video signal to a Talon number plate recognition computer which has the Talon ANPR software and car park management software installed.

The product is ideal for retail parks, shopping centres, super markets, motorway service areas and any other organisation that provides free parking to it's customers on a limited time basis. It provides organisations and car park operators with a comprehensive method of monitoring, controlling access and managing car parking resources or site traffic. The application is ideal for resolving any 'over stay' disputes, providing hard evidence on time of occupancy.

If required the system can be configured to automatically display user defined tariffs, so that charges can be made based on the overstay period.

## KEY FEATURES

- Modular Design to meet customer requirement
- Scalable System to suit single lane or multi lane solutions
- User Friendly Display
- Car Park Management - measures length of stay and calculates parking charge or alarm event
- Barrier Control
- Vehicle and number plate imaging option
- Robust Performance - tolerating poor quality licence plates
- Interfaces to Variable Message Display - display vehicle number plate and associated information
- Links to third party interfaces - parking systems, CCTV, OEM Databases and Weighbridge Management Systems

## APPLICATIONS

The Car Park Management application can be used in a wide variety of applications including:

- Private Commercial Car Parks
- Shared Residential Car Parks
- Supermarkets
- Motorway Services
- Airports
- Railway Stations
- Retail Parks
- Shopping Centres
